Java Backend Developer (Spring Boot · REST APIs · SQL) with 2+ years at Thomas Cook India - shipped production features across Forex, Payments, Flights, and Hotels platforms.

PROFESSIONAL EXPERIENCE

Software Engineer (Assistant Manager) | Thomas Cook India Limited

Jul 2021 – Mar 2023

- Architected and delivered 5+ production integrations for the Forex platform, reducing time-to-market on new currency features by streamlining end-to-end deployment ownership.
- Owned the full-cycle delivery of ForexMate from inception to launch - designed backend modules, coordinated QA, and managed go-live; product achieved successful market penetration within 3 months.
- Served as Release Manager for weekly production deployments across multiple microservices, maintaining zero unplanned downtime across a 2-year tenure.
- Boosted Flights module throughput by ~60% by identifying bottlenecks, refactoring core service logic, and onboarding 2 new airline vendor APIs.
- Built tailored backend solutions for 8 distinct Payment module scenarios (domestic, international, wallet, EMI), ensuring PCI-compliant and fault-tolerant transaction flows.
- Led Hotels portal revamp by integrating 2 third-party vendors, delivering improved search accuracy and a faster booking experience.
- Developed the Visa module ground-up - from requirements gathering through regulatory compliance validation - cutting processing errors noticeably.
- Built an RBAC-driven Admin Portal in Spring Boot + ReactJS serving 50+ internal users across sales and ops teams.
- Contributed to 2 white-label product rollouts (Visa & Forex) for SOTC, cutting client-specific implementation effort significantly through reusable configuration layers.
- Designed the Canvas reporting module, surfacing account-level analytics that enabled data-driven decisions for the finance team.
- Executed technology upgrade initiatives migrating core services to Spring Boot, Java 11, and Tomcat 10.1.x with no regression incidents.

TECHNICAL SKILLS

Languages: Java (J2EE, Java 11), SQL, JavaScript, Python, C++

Frameworks: Spring Boot, Spring MVC, Hibernate / JPA, ReactJS, KnockoutJS, Bootstrap

Databases: MySQL, Oracle, MongoDB

APIs & Protocols: RESTful Web Services, XML, JSON, OAuth

Tools & DevOps: Git, TortoiseSVN, Jenkins, Postman, OpenCMS, JIRA

IDEs: IntelliJ IDEA, Eclipse, NetBeans, Spring Tool Suite, VS Code

GenAI / ML: Google Gemini API, RAG pipelines, ChromaDB, LangChain (basics)

PROJECTS

- HealthCompanion** (GenAI Capstone): Conversational AI health assistant built on Google Gemini + RAG + ChromaDB, grounded in 2,200+ peer-reviewed medical documents. Delivers symptom interpretation and location-aware provider recommendations.
- CareerMate:** AI-powered career recommendation web app - matches registered candidates to fields based on aptitude data using rule-based and ML-assisted logic.
- VocaScroll:** Comprehensive Chrome extension that brings voice-controlled navigation to your browsing experience.
- K9Kare:** Two-sided marketplace connecting dog owners with vetted sitters; includes booking, profile management, and review workflows.

EDUCATION

Master of Computer Applications

2021

Veer mata Jijabai Technological Institute, Mumbai

Bachelor of Science – Information Technology

2018

Mulund College of Commerce, Mumbai
